## ➤ OBJECTIVE

Diligent React Developer is adept at crafting functional and fully responsive web applications using, ReactJS and Restful API. Committed to continuous learning, aspiring to become a full-stack web developer.

## ➤ SKILL

**Frontend:** CSS, JavaScript, React JS, Tailwind CSS, Bootstrap, Redux, PSD to HTML, NextJS(beginner)

**Backend (Beginner)**: NodeJS, ExpressJS, Mongoose, MongoDB, Restful API

**Related Tools:** WordPress, Elementor, Chrome-Dev-Tool, VS Code, Git & GitHub, Firebase, Figma

## ➤ PROJECTS

**1. Project Name**: Result Management System (**RMS**)                    **Live Site**    **Frontend**

- To automate the resulting system of the university, this application is developed. This Result Management System (RMS) manages and publishes student academic results.
- It offers academic session and course management, result entry, and modification, automates the result grade calculation, and mark sheet generation as PDF.
- User-role-based authorization (Chairman, Teacher, and Student) to control the access of information.
- Used Technologies: React, Tailwind, React-Router, React-pdf-renderer, Axios, React hook form etc.

**App Credentials: 1. Admin:** email: teacher-one@gmail.com, password: 18102900, **2. Student:** email: student-one19@gmail.com, password: 19102901

**2. Project Name**: Job Portal Application (**Hunter**)          **Live Site**    **Frontend**    **Backend**

- This MERN Stack-based Job Portal Web Application offers comprehensive functionalities to manage job applications and various types of users. Admins control the whole application.
- User-role-based authorization (Admin, Recruiter, and Applicant) to control the access of information.
- Applicant can update their profiles, apply for jobs, and explore the status of their applied jobs.
- Recruiters can post, manage, and accept/reject job applications by reviewing those job applications.
- Used Technologies: React, Tailwind, React-Router, Rechart, Axios, ExpressJS, MongoDB, JWT etc.

**App Credentials: 1. Admin:** email: admin1@gmail.com, password: 12345678, **2.Student:** email: recruiter1@gmail.com || password: 12345678 **3. Applicant:** email: user1@gmail.com || password: 12345678

**3. Project Name**: University Booking Application (**uniBook**)          **Live Site**    **Frontend**    **Backend**

- This MERN stack web application provides a platform to apply and get admitted to a college.
- From this website, users can easily gather information about various colleges and also can apply for admission to the college of their choice.
- Users can update their profiles and also add their feedback about their admitted college.
- Used Technologies: React, Tailwind, React-Router, Redux, Firebase, ExpressJS, MongoDB, JWT etc.

**App Credentials: 1. User:** email: user1@gmail.com, password: 123456

## ➤ EDUCATION

**Bachelor of Science (B.Sc.) in Electrical and Electronic Engineering**

Jatiya Kabi Kazi Nazrul Islam University, Trishal, Mymensingh                    Passing Year: **2024**

## ➤ LANGUAGE PROFICIENCY

→ English (Conversational)                    → Bangla (Native)
